FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. claims: 1-10

Claims 1-10 are directed towards a plating apparatus comprising a plating tank, a holder for holding a workpiece and a ring-shaped nozzle pipe in the tank for injecting plating solution toward the surface of the workpiece to be plated.

2. claims: 11-21

Claims 11-21 are directed towards a plating apparatus comprising a plating tank and a stirring mechanism having a stirring vane. Independent claims 11, 15, 18 and 20 define embodiments of the stirring vane, some of the claims with regard to a surface to be plated.

International application No.

INTERNATIONAL SEARCH'REPORT

PCT/JP2004/003040

Box No. IV Text of the abstract (Continuation of item 5 of the first sheet)

The present invention is concerned with a plating apparatus for use in forming a plated film in trenches, via holes, or resist openings that are defined in a surface of a semiconductor wafer, and forming bumps to be electrically connected to electrodes of a package, on a surface of a semiconductor wafer. The plating apparatus (170) has a plating tank (186) for holding a plating solution (188), a holder (160) for holding a workpiece (W) and bringing a surface to be plated of the workpiece into contact with the plating solution (188) in the plating tank (186). A ring-shaped nozzle pipe (220) having a plurality of plating solution injection nozzles (222) for injecting the plating solution (188) to the surface to be plated of the workpiece held by the holder (160) to supply the plating solution (188) into the plating tank (186), or a stirring mechanism having a stirring vane are disposed in the plating tank (186).
